EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

1. Claims 1-10 are allowable over prior art because related references do not disclose not modifying an escape character during transparent mode of a data compression operation.

According to the previous standard by which prior art references abide, the escape character was modified in transparent mode of a data compression operation. Claims 12 and 17-20, which have been renumbered claims 11-15, are allowable over prior art references because related references do not disclose an encoder and decoder selectively operable in any of a compression mode, transparent mode, and a parameter mode, wherein the parameter mode is entered only from transparent mode, parameter negotiation comprises a proposed length of history for the transmit and received data, an escape character is used switching from transparent mode to parameter mode, the included decoder dictionary is not updated while in transparent mode, and the included encoder/decoder dictionary is re-initialized when switching from transparent mode to compression mode. Claims 21-33, which have been renumbered claims 16-28, are allowable over prior art because related references do not disclose negotiating data parameters in a data compression system which involves switching from a transparent mode of operation to a parameter mode of operation, negotiation data compression parameters, and then switching from the parameter mode back to the transparent mode.
